Privacy Policy

Papa Wheelie respects and is committed to protecting your privacy. Our Privacy Policy details why and when we collect your personal information and how we use it. It also explains under what circumstances we disclose your information to third parties and the security measures we take to protect your privacy.

Collection of Personal Details

Papa Wheelie collects your details when you submit those details to us either online (via our websites, or agent websites), or by fax, post or email.

These details are stored within our secure database system and submitted to the relevant registry when you register or transfer a domain name to Papa Wheelie. The details collected include your full name, address, phone and fax numbers and email address.

Use of Personal Details

ICANN (Internet Corporation for Assigned Names and Numbers) is the organization that develops and governs domain name policy. As part of the domain name policy, ICANN requires that accredited domain name Registrars (of which Papa Wheelie is one) must make personal information relating to a domain name available via the publicly accessible WHOIS

database. Consequently Papa Wheelie is not able to control how members of the public may use this information.

Papa Wheelie will use your personal details to enable us to perform our role as an accredited domain name Registrar. This includes contacting you when you apply for a domain name, or at any time during the license period of your domain name, to obtain relevant information in regards to your application, or to advise you of relevant information regarding your license (including renewal dates and system changes that may affect your communications with us).

We may also use your personal details to contact you to discuss additional products and services that Papa Wheelie offers. Your details could be used to measure and assess our customer service, and analyse customer purchasing preferences.

Accuracy

You may access and update the personal information we provide to the registries in respect of your domain name licence at any time. Simply use your email address and password to login to our Online Management System. If you believe that Papa Wheelie may hold other personal information about you which is inaccurate, please contact us via email to papa@papawheelie.com.au and we will take reasonable steps to ensure that it is corrected.

Security

Helping you to keep your information secure is important to us. In order to protect the security of personal information transmitted to us over the internet, our web servers support the use of the Secure Socket Layer (SSL) Protocol where appropriate. Using this protocol, information transferred between our systems is encrypted. You can also take simple precautions to help protect your security, such as protecting against the unauthorised use of your username or password or other authentication id.

Changes

Papa Wheelie may make changes to its privacy policy. You should check our privacy policy from time to time to see if we have made any changes to it.

WHOIS

When a domain name is registered, certain information is collected for use on the WHOIS service. The WHOIS service allows internet users to query a domain name to find out the identity and contact details of the registrant. The public WHOIS service is a standard feature of domain name systems around the world. Please see auDA's WHOIS policy at <http://www.auda.org.au/whois-policy> which sets out auDA's guidelines on the collection, disclosure and use of WHOIS data.

Systems Access

Our domain name registration order flow and Online Management System are generally accessible 24 hours a day and achieve a high level of system availability. Scheduled maintenance times are generally at the same time every fortnight, during timeframes intended to cause minimal disruption to customers.

Security

Papa Wheelie is serious about protecting your private data and domain names. We employ a system of authentication by:

- providing clients with a user name and password pair to access Papa Wheelie's Online Management System, and
- generating a separate Domain Name Password (AuthInfo), which is recognised by the registry, and is used to authenticate a request to change the 'Registrar of Record' from Papa Wheelie to another .au accredited registrar.
